AVERAGE ANNUAL DAILY TRAFFIC (AADT) COUNT DATA 1991-2007 FOR FRANKLIN COUNTY, MASSACHUSETTS

APRIL 2008

*Franklin Regional Council of Governments
425 Main Street, Suite 20, Greenfield, MA 01301
Telephone: 413-774-3167*

**This report was prepared under contract 35003 in cooperation with the Massachusetts Highway Department
and the U.S. Department of Transportation, Federal Highway Administration**

The Franklin Regional Council of Governments does not discriminate on the basis of disability with respect to admission to, access to, or operation of its programs, services or activities. Individuals who may need auxiliary aids for effective communication for FRCOG programs or services should call the FRCOG Main Office at 413-774-3167. (MA Relay System: 800-439-2370)

AVERAGE ANNUAL DAILY TRAFFIC (AADT) COUNT DATA 1991-2007

Introduction

The Franklin Regional Council of Governments (FRCOG) is a multi-purpose agency serving the 26 municipalities of Franklin County. The FRCOG is also the Regional Planning Agency for Franklin County, 1 of 13 Regional Planning Agencies in Massachusetts.

Franklin County is the northern most county in the Connecticut River Valley. It borders New Hampshire and Vermont on the north, Worcester County on the east, Hampshire County on the south and Berkshire County on the west. Franklin County's 26 towns comprise approximately 725 square miles and a population of approximately 70,000. The County is serviced by a 1700 mile road network, which includes all classifications of roads from interstate highway to gravel surfaced local roads.

Traffic Counting Services

The FRCOG has provided traffic counting services to the region's towns since 1991. In addition, the FRCOG conducts counts for the Massachusetts Highway Department (MassHighway) at set locations, generally on a bi-annual basis. MassHighway conducts their own traffic counts at various locations in Franklin County, and operates four permanent continuous counting stations in Buckland Bernardston and Deerfield. These permanent stations collect data 24 hours a day, 365 days of the year. Data collected by FRCOG and MassHighway at almost 700 different locations has been included in this booklet.

Note

Due to the institution of a new calculation process in 2002, some of the AADT volumes in this booklet differ slightly to those listed in booklets published prior to 2001.

Data Description

AADT - (Average Annual Daily Traffic)

This is the average 24-hour traffic volume using a particular roadway over an entire year. It is calculated from data collected over at least two full continuous weekdays, which is then averaged to give the average weekday traffic (AWT) volume. The AWT is then multiplied by a seasonal adjustment factor, producing an AADT volume for the location.

Seasonal Adjustment Factor-

Seasonal adjustment factors are calculated by MassHighway from data collected at 212 permanent continuous counting stations located throughout the State. These factors allow data collected over a short period of time to reflect the differing travel patterns experienced throughout the year. For example, a count conducted in April will likely have an AWT volume lower than average, whereas a count conducted in October will likely have an AWT volume higher than average. Therefore the seasonal adjustment factor for April would increase the recorded AWT volume, and the seasonal adjustment factor for October would decrease the AWT recorded volume.

Abbreviations

T. L. - Town Line
RTE. - Route
km - Kilometers
Btwn - Between

S. L. - State Line
I-91 - Interstate 91
ft - Feet
